                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is that of a novel synthetic AgrD2 lactone cyclic peptide in which residue 5 of the peptide is linked to residue 9 via a lactone bond. The peptide is linked to residue 9 via a station bond. The peptide is derived from an AgrD2 peptide 0 via a station bend the peptide is derived from an AgrD2 peptide of staphylococcus aureus group II. AgrD2 is a secreted agr-encoded peptide, where the agr locus controls the synthesis of virulence factor and other extracellular proteins responsible for pathogenicity in S. aureus. The biological activity of the synthetic peptide was assayed using cultured S. aureus strains containing a beta-lactamase reporter gene fused to the agrs prometer. This allowed activation of inhibition of the agr response to be monitored spectrophotomerically. The lactone AgrD2 peptide inhibited the agr response of group I S. aureus strains without provides claimed cyclic peptides (see AAMS0899-906 and AAMS0899-106 and methods for preparing them especially peptides where the cyclic bond is a lactone bond. The cyclic peptides are useful for bacterial interference, especially for the treatment of S. aureus infection.
                                                                                                                                                                                                                                                                                                                                                                                                     ö

The present sequence is that of a novel synthetic AgrD2 linear free acid peptide. The peptide is derived from the cyclic AgrD2 peptide of Staphylococous aureus group II. AgrD2 is a secreted agr-encoded peptide, where the agr locus controls the synthesis of virulence factor and other extracellular proteins responsible for pathogenicity in S. aureus. The biological activity of the synthetic peptide was assayed using cultured S. aureus strains containing a beal-lactamase reporter gene fused to the agr3 promoter. This allowed activation or inhibition of the agr response to be monitored spectrophotometrically. Unlike an AgrD2 thiololactone cyclic peptide (see AAM51001), the present peptide was unable to either activate or inhibit the agr response, even when added to cultured cells at Un concentrations. The invention provides claimed cyclic peptides (see AAM51091) and methods for preparing them. The cyclic peptides are useful for bacterial interference, especially for the creatment of S. aureus infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

                                                                                                                                                                                                                                                                         g
                                         The present sequence is that of a novel synthetic AgrD2 linear thioester peptide. The peptide is derived from the cyclic AgrD2 peptide of Staphylococcus aureus group II. AgrD2 is a secreted agr-encoded peptide, where the agr locus controls the synthesis of virulence factor and other extracellular proteins responsible for pathogenicity in S. aureus. The biological activity of the synthetic peptide was assayed using cultured S. aureus strains containing a beta-lactamase reporter gene fused to the agrB3 promoter. This allowed activation or inhibition of the agr response to be monitored spectrophotometrically. Unlike an AgrD2 thiololactone cyclic peptide (see AAM51001), the present peptide was unable to either activate or inhibit the agr response, even when added to cultured cells at UM concentrations. The invention provides claimed cyclic peptides and aAAM50899-306 and AAM50899 and methods for preparing them. The cyclic peptides are useful for bacterial interference, especially for the treatment of S. aureus infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence represents a cyclic peptide derived from the Staphylococcus aureus AgrD peptide. The invention relates to AgrD derived peptides, a composition containing a peptide and a carrier, and a method for the production of the cyclic peptides. The peptide inhibits the agr response, which is normally associated with the release of virulence factors of Staphylococcus aureus. An AgrD peptide is produced by S. aureus that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New cyclic peptides for treating infections with Staphylococcus aureus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gapa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Staphylococcus aureus infection; cyclic peptide; AgrD; agr response;

The invention relates to AgrD derived cyclic peptides, a composition contening a peptide and a carrier, and a method for the production of the cyclic peptides. The peptide inhibits the agr response, which is normally associated with the release of virulence factors of Staphylococcus aureus. An AgrD peptide is produced by S. aureus that activates the agr response in strains of a single group, but interferes with this response in strains of different groups. The peptides and composition containing them can be used to treat infections by S. aureus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New cyclic peptides for treating infections with Staphylococcus aureus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                         Staphylococcus aureus infection; AgrD; agr response; treatment; virulence factor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ÷
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         87.2%; Score 34; DB 3; Length 9; 88.9%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to the use of autoinducer-2 (AI-2) agonists or antagonists for regulating activity of autoinducer-2 receptor, regulating bacterial growth and pathogenesis. Synergistic antibiotic compositions comprising inhibitors of the quorum-sensing pathway of a microorganism are also provided. Methods using such AI-2 analogues are useful for treating pathogen-associated disease states. The compounds and antibiotic compositions can be used to inhibit bacterial cell growth and/or biofilm formation on a medical device, particularly for promoting growth of skin graft replacements used in the treatment of burns and ulcers. They may also be used to aid wound repair, and to inhibit bacterial cell growth and biofilm formation in or on products or devices used for personal hygiene. The present sequence represents a inhibitor of peptide-mediated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Use of autoinducer-2 agonists or antagonists for regulating activity of autoinducer-2 receptor, regulating bacterial growth and pathogenesis, also antibiotic compositions.

```
The present sequence is that of a novel synthetic AgrD2 lactam cyclic peptide in which residue 5 of the peptide is linked to residue 9 via a clactam bond. The peptide is derived from an AgrD2 peptide 0 via a clactam bond. The peptide is derived from an AgrD2 peptide of staphylococous aurens group II. AgrD2 is a secreted agr-encoded peptide, where the agr locus controls the synthesis of virulence factor and other extracellular proteins responsible for pathogenicity in S. aureus. The biological activity of the synthetic peptide was assayed using cultured S. aureus strains containing a beta-lactamase reporter gene fused to the agrs prometer. This allowed activation or inhibition of the agr response to be monitored spectrophotometrically. The AgrD3 lactam peptide inhibited the agr response in group I S. aureus strains and did not activate the agr response in group I S. aureus strains and did not activate the agr response in group I. II or III strains. The invention provides claimed cyclic peptides (see AAX/S0099-906 and AAX/S0099-006 and Amanowally for the treatment of S. aureus infection. (Updated on 07-AŭG-2003 to correct OS fileld.)

The present sequence is that of a protected peptide used in an example of the preparation of novel synthetic cyclic peptides of the invention (see AAMS0899-906). The peptide corresponds to the Staphylococcus aureus AAMS089-906). The peptide corresponds to the Staphylococcus aureus AAMS089-906. The synthesised on a Wang-resin using an Fmoc N-alpha (lactam). It was synthesised on a Wang-resin using an Fmoc N-alpha protection strategy. Following chain assembly, the peptide was cleaved from the support and the Dpr-5 residue deprotected by treatment with a trifluoroacetic acid:anisole:water mixture (90:5:5) for 4 hr. The partially protecting operated alpha carboxylates were then dissolved in DMF and treated with PyBOP. Cyclization was complete after 2 hr. The remaining protecting groups were removed by treatment with HF and the peptide purified by HPLC. The cyclic peptide is capable of inhibiting the agr response of Staphylococcus aureus. The thiololactone structure within native AgrD peptides is required for activation of this response.

Replacement of the thiol ester component of the cyclic ring structure with a lactam (as in the present case) or a lactone can destroy agr response activating activity while preserving and enhancing inhibitory activity. The cyclic peptides are useful for bacterial interference,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel synthetic, cyclic AgrD-autoinducing peptide for bacterial interference and for treating Staphylococcus aureus infection in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   activity. The cyclic peptides are useful for bacter
especially for the treatment of S. aureus infection

This sequence represents a cyclic peptide derived from the Staphylococcus aucueus AgrD peptide. The invention relates to AgrD derived peptides, a composition containing a peptide and a carrier, and a method for the production of the cyclic peptides. The peptide inhibits the agr response, which is normally associated with the release of virulence factors of Staphylococcus aureus. An AgrD peptide is produced by S. aureus that activates the agr response in strains of a single group, but interferes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New cyclic peptides for treating infections with Staphylococcus aureus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /note= "N-terminal residue forms bond with C-terminal residue to form a cyclic peptide"

                                                                                                                                                                                                                                                                  The present sequence is that of a novel synthetic cyclic peptide of the invention that is capable of inhibiting the agr response of staphylosoccus aureus. It is an AgrD-autoinducing peptide, where AgrD is secreted agr-encoded peptide and where the agr locus controls the synthesis of virulence factor and other extracellular proteins responsible for pathogenicity in S. aureus. Preferred peptides may have the sequence NH2-X(n)-2-X(y)-COM, with a cyclic bond between the Z residue and COCH other than a thioseter bond, where X is an amino acid, an amino acid analogue, a peptidomimetic or non-amide isostere, Z is a an amino acid analogue, a peptidomimetic or non-amide isostere, Z is a an amino acid analogue, a peptidomimetic or non-amide isostere, Z is a synthetic or a biosynthetic amino acid, act of and y is 1-10. The cyclic bond is especially a lactam or lactone bond. The thiololactone structure within native AgrD peptides is required for activation of the structure can destroy agr response activating activity while preserving and enhancing inhibitory activity. A claimed method of preparing a cyclic
                                                                                    ô
with this response in strains of different groups. The peptides and composition containing them can be used to treat infections by S. aureus \,

peptide involves: assembling a linear peptide chain on to a solid phase resin support; deprotecting the resulting protected assembled peptide; treating the deprotected peptide with neutral buffer for a time sufficient to form the cyclic peptide and cleave the peptide from the support; and recovering the cyclic peptide. The peptide is useful for bacterial interference, especially for the treatment of S. aureus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ABP51540 to ABP53547 represent cyclic peptides (I) from the present invention. The present invention also describes a method for treating Staphylococcus aureus infection comprising the administration of a composition comprising (I). (I) has antibacterial activity, and can be used as an agr gene response inhibitor. The peptides are useful for treating S. aureus infections
                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Cyclic peptide; Staphylococcus aureus; infection; antibacterial; agr response inhibitor.
                                                                                                                                                                                                                                                                                                            0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cyclic peptides, useful for treating Staphylococcus aureus

This sequence represents the Staphylococcus aureus AgrDII derived composition. The invention relates to AgrD derived cyclic peptides, a composition containing a peptide and a carrier, and a method for the production of the cyclic peptides. The peptide inhibits the agr response, which is normally associated with the release of virulence factors of staphylococcus aureus. An AgrD peptide is produced by S. aureus that activates the agr response in strains of a single group, but interferes with this response in strains of different groups. The peptides and composition containing them can be used to treat infections by S. aureus
                                                                                                                                                                                                                                                                                                                     New cyclic peptides for treating infections with Staphylococcus aureus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Autoinducer-2; AI-2; antibiotic; antibacterial; dermatological; vulnerary; pheromone; agr system; accessory gene regulator; cyclic.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence represents the Staphylococcus aureus AgrDII derived peptide. The invention relates to AgrD derived cyclic peptides, a composition containing a peptide and a carriter, and a method for the production of the cyclic peptides. The peptide inhibits the agr response, which is normally associated with the release of virulence factors of Staphylococcus aureus. An AgrD peptide is produced by S. aureus that activates the agr response in strains of a single group, but interferes with this response in strains of different groups. The peptides and composition containing them can be used to treat infections by S. aureus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New cyclic peptides for treating infections with Staphylococcus aureus

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ô
                                                                                                                                                                         The invention relates to the use of autoinducer-2 (AI-2) agonists or antagonists for regulating activity of autoinducer-2 receptor, regulating becterial growth and pathogenesis. Synezyistic antibiotic compositions comprising inhibitors of the quorum-sensing pathway of a microorganism are also provided. Methods using such AI-2 analogues are useful for treating pathogen-associated disease states. The compounds and antibiotic compositions can be used to inhibit bacterial cell growth and/or biofilm formation on a medical device, particularly for promoting growth of skin graft replacements used in the treatment of burns and ulcers. They may also be used to aid wound repair, and to inhibit bacterial cell growth and biofilm formation in or on products or devices used for personal hygiene. The present sequence represents a inhibitor of peptide-mediated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              'note= "note linked to residue 9 to form cyclic peptide"

the preparation of novel synthetic cyclic peptides of the invention (see AAM50899-906). The peptide corresponds to the Staphylococcus aureus agric on a Wang-resin using an Fmoc N-alpha protection strategy. Following chain assembly, the peptide was cleaved from the support and the Ser-5 residue deprotected by treatment with a trifluoroaccial protected codianisols:water mixture (90:55) for 4 hr. The partially protected peptide anaboxylates were then dissolved in DMF and treated with PyBOPs and a catallytic amount of dimethylaminopyridine. Cycliation was complete after 2 hr. The remaining protecting groups were then removed by treatment with HP and the peptide by HPLC. The cyclic peptide is capable of inhibiting the agr response of Staphylococcus aureus. The thioloaccone structure within native AgrD peptides is required for activation of this response. Replacement of the thiol ester component of the cyclic ring structure with a lactone (as in the present case) or a lactam can destroy agr response activating activity while preserving and enhancing inhibitory activity. The cyclic peptides are useful for bacterial interference, especially for the treatment of S. aureus
                                                                                                                                                                                                                                                                                                                                          sequence is that of a protected peptide used in an example of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     'note= "note linked to residue 9 to form cyclic peptide"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          "note linked to residue 5 to form cyclic peptide"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AgrD2, agr response; inhibitor; antibiotic; antibacterial; infection; therapy; lactone; cyclic.

The present sequence is that of a novel synthetic AgrD2 lactone cyclic peptide in which residue 5 of the peptide is linked to residue 9 via a lactone bond. The peptide is lactone bond. The peptide is derived from an AgrD2 peptide 9 via a strone bond. The peptide is derived from an AgrD2 peptide of factor and other extracellular proteins responsible for pathogenicity in S. aureus. The biological activity of the synthesis of virulence factor and other carracellular proteins responsible for pathogenicity in S. aureus. The biological activity of the synthetic peptide was assayed using cultured S. aureus strains containing a beta-lactamase reporter gene fused to the agric protein activity of the support of the inhibition of the agr response to be monitored spectrophotometrically. The lactone AgrD2 peptide inhibited the agr response of group I S. aureus strains without activating them agr response of group I S. aureus strains without provides claimed cyclic peptides (see AAMS0899-906 and AAMS0899) and methods for preparing them, especially peptides where the cyclic bond is a lactone bond. The cyclic peptides are useful for bacterial interference, septically for the treatment of S. aureus infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AgrD2; agr response; inhibitor; antibiotic; antibacterial; infection;
                                                                                                                                    Novel synthetic, cyclic AgrD-autoinducing peptide for bacterial interference and for treating Staphylococcus aureus infection in a subject.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

The present sequence is that of a novel synthetic AgrD2 linear free acid peptide. The peptide is derived from the cyclic AgrD2 peptide of Staphylococcus aureus group II. AgrD2 is a secreted agr-encoded peptide, where the agr locus controls the synthesis of virulence factor and other extracellular proteins responsible for pathogenicity in S. aureus. The biological activity of the synthetic peptide was assayed using cultured S. aureus strains containing a beta-lactamase reporter gene fused to the agr3 promoter. This allowed activation or inhibition of the agr response to be monitored spectrophotometrically. Unlike an Agr2 thiololactone cyclic peptide (see AAMS1001), the present peptide was unable to either activate or inhibit the agr response, even when added to cultured cells at un concentrations. The invention provides claimed cyclic peptides and AAMS09999 and methods for preparing them. The cyclic peptides are useful for bacterial interference, especially for the treatment of S. aureus infection
                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

                              The present sequence is that of a novel synthetic AgrD2 linear thioester peptide. The peptide is derived from the cyclic AgrD2 linear thioester Staphylococcus aureus group II. AgrD2 is a secreted agr-encoded peptide, where the agr locus controls the synthesis of virulence factor and other extracellular proteins responsible for pathogenicity in S. aureus. The biological activity of the synthetic peptide was assayed using cultured S. aureus strains containing a beta-lactamase reporter gene fused to the agr3 promoter. This allowed activation or inhibition of the agr response to be monitored spectrophotometrically. Unlike an AgrD2 thiololactone cyclic peptide (see AAMS1001), the present peptide was unable to atther activate or inhibit the agr response, even when added to cultured cells at um concentrations. The invention provides claimed cyclic peptides (see AAMS10999) and methods for preparing them. The cyclic peptides (see AAMS10999) and methods for preparing them. The cyclic peptides (see AAMS1089-906 and AAMS1099) in therference, especially for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence represents a cyclic peptide derived from the Staphylococcus aureus AgrD peptide. The invention relates to AgrD derived peptides, a composition containing a peptide and a carrier, and a method for the production of the cyclic peptides. The peptide inhibits the agr response, which is normally associated with the release of virulence factors of Staphylococcus aureus. An AgrD peptide is produced by S. aureus that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New cyclic peptides for treating infections with Staphylococcus aureus.
                                                                                                                                                                                                                                                                                                                                     Gaps

The invention relates to AgrD derived cyclic peptides, a composition contexining a peptide and a carrier, and a method for the production of the cyclic peptides. The peptide inhibits the agr response, which is normally associated with the release of virulence factors of Staphylococcus aureus. An AgrD peptide is produced by S. aureus that activates the agr response in strains of a single group, but interferes with this response in strains of different groups. The peptides and composition containing them can be used to treat infections by S. aureus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New cyclic peptides for treating infections with Staphylococcus aureus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Staphylococcus aureus infection; AgrD; agr response; treatment;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  .

```
The invention relates to the use of autoinducer-2 (AI-2) agonists or antagonists for regulating activity of autoinducer-2 receptor, regulating bacterial growth and pathogenesis. Synergistic antibiotic compositions comprising inhibitors of the quorum-sensing pathway of a microorganism are also provided. Methods using such AI-2 analogues are useful for treating pathogen-associated disease states. The compounds and antibiotic compositions can be used to inhibit bacterial cell growth and/or biofilm formation on a medical device, particularly for promoting growth of skin graft replacements used in the treatment of burns and ulcers. They may also be used to aid wound repair, and to inhibit bacterial cell growth and biofilm formation in or on products or devices used for personal hygiene. The present sequence represents a inhibitor of peptide-mediated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Use of autoinducer-2 agonists or antagonists for regulating activity of autoinducer-2 receptor, regulating bacterial growth and pathogenesis, also antibiotic compositions.

The present sequence is that of a novel synthetic AgrD2 lactam cyclic peptide in which residue 5 of the peptide is linked to residue 9 via a lactam bond. The peptide is derived from an AgrD2 peptide 9 via a strand bond. The peptide is derived from an AgrD2 peptide 9 via a strand bond. The peptide is derived from an AgrD2 peptide 9 via a strand bond. The synthesis of virulence factor and other extracellular proteins responsible for pathogenicity in S. aureus. The biological activity of the synthetic peptide was assayed using cultured S. aureus strains containing a beta-lactamase reporter gene fused to the agrical peptide approacher. This allowed activation or inhibition of the agr response in group I S. aureus strains and did not continue the agr response in group I S. aureus strains and did not cotinue the agr response in group I S. aureus strains and did not cotinue the agr response in group I S. aureus strains and did not methods for preparing them, especially where the cyclic bond is a lactam cortone bond. The cyclic peptides (see AAMS0899-906 and AAMS0899-106 and nethods for preparing them, especially where the cyclic bond is a lactam interference, especially for the treatment of S. aureus infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ·;

```
The present sequence is that of a protected peptide used in an example of the preparation of novel synthetic cyclic peptides of the invention (see AAMS0899-960. The peptide corresponds to the Staphylococcus aureus AAMS089-960. The peptide corresponds to the Staphylococcus aureus carbon a grant sequence with a Cyss to diaminopropionic acid (Dpr) mutation (lactam). It was synthesised on a Wang-resin using an Fmoc N-alpha protection strategy. Following chain assembly, the peptide was cleaved from the support and the Dpr-5 residue deprotected by treatment with a trifluoroacetic acid:anisole:water mixture (90:5:5) for 4 hr. The partially protecting groups were removed by treatment with HF and the peptide purified by HPLC. The cyclic peptide is capable of inhibiting the captide purified by HPLC. The cyclic peptide is capable of inhibiting the peptide purified by HPLC. The cyclic peptide is capable of inhibiting the captive AgrD peptides is required for activation of this response. Replacement of the thiol ester component of the cyclic ring structure within a lactam (as in the present case) or a lactone can destroy agr cresponse activating activity while preserving and enhancing inhibitory activity. The cyclic peptides are useful for bacterial interference,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel synthetic, cyclic AgrD-autoinducing peptide for bacterial interference and for treating Staphylococcus aureus infection in a

A387 junction protein Cx31 - rat

N.Alternate names: connexin-31

C.Species: Rattus norvegicus (Norway rat)

C.Accession: A38737

R.Hoh, J.H., John, S.A.; Revel, J.P.

J. Biol. Chem. 266, 6524-6531, J991

A,Title: Molecular cloning and characterization of a new member of the gap junction gene A,Reference number: A38737; MUID:91177912; PMID:1706719

The present sequence represents a cyclic peptide which is a modulator of the agr response. Agonists of this response antagonize early stages of virulence, specifically production of cell wall proteins (so are preferred for prophylaxis), while antagonists interfere with the later
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /n.4

stages of virulence, specifically secretion of exotoxin (so are preferred for treatment). The peptides are used to treat or prevent bacterial infections in humans and animals, also for incorporation into medical articles, e.g tampons (to prevent toxic shock syndrome), prostheses and wound dressings. Particularly they are active against staphylococci, specifically Staphylococcus aureus but also coagulase-negative S. epidermidis, implicated in infection of medical implants. note: this sequence does not appear in the specification; it was created using information provided
                                                                                                                                                                                                                                                                ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This sequence represents a cyclic peptide derived from the Staphylococcus aureus AgrD peptide. The invention relates to AgrD derived peptides, a composition containing a peptide and a carrier, and a method for the production of the cyclic peptides. The peptide inhibits the agr response, which is normally associated with the release of virulence factors of Staphylococcus aureus. An AgrD peptide is produced by S. aureus that activates the agr response in strains of a single group, but interferes with this response in strains of different groups. The peptides and composition containing them can be used to treat infections by S. aureus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New cyclic peptides for treating infections with Staphylococcus aureus

The present sequence is that of a novel synthetic cyclic peptide of the invention that is capable of inhibiting the agr response of staphylococcus aureus. It is an AgrD-aucoinducing peptide, where AgrD is a secreted agr-encoded peptide and where the agr locus controls the ascreted agr-encoded peptide and where the agr locus controls the synthesis of virulence factor and other extracellular proteins

CC synthesis of virulence factor and other extracellular proteins

CC responsible for pathogenicity in S. aureus. Preferred peptides may have the sequence NH2-Xin)-Z-X(y)-CCOM, with a cyclic bond between the Z residue and COOH other than a thioester bond, where X is an amino acid, an amino acid analogue, a peptidomimetic or non-amide isostere, Z is a synthetic or a biosynthetic amino acid, n is 0-10 and y is 1-10. The cyclic bond is especially a lactam or lactone bond. The thiololactone contractive within native AgrD peptides is required for activation of the agr response. Blimination of the thiol ester component of the cyclic ring structure can destroy agr response activating activity while preserving and enhancing inhibitory activity. A claimed method of preparing a cyclic peptide involves: assembling a linear peptide chain on to a solid phase creating the deprotecting the resulting protected assembled peptide involves: assembling a linear peptide chain on to a solid phase creating the deprotected peptide and cleave the peptide from the support; and recovering the cyclic peptide. The peptide is useful for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ABP53540 to ABP53547 represent cyclic peptides (I) from the present invention. The present invention also describes a method for treating Staphylococcus aureus infection comprising the administration of a composition comprising (I). (I) has antibacterial activity, and can be used as an agr gene response inhibitor. The peptides are useful for treating S. aureus infections
                                                                       Gaps
bacterial interference, especially for the treatment of S. aureus infection
                                                                                                                                                                                                                                    Cyclic peptide; Staphylococcus aureus; infection; antibacterial; agr response inhibitor.
                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cyclic peptides, useful for treating Staphylococcus aureus

The invention relates to a novel modulator of binding between a PDZ protein (post-synaptic density protein (20-1) and a PDZ ligand (PL) protein and Sonula Goccludin 1 protein (20-1) and a PDZ ligand (PL) protein. The modulator is a peptide having 3 residues of a C-terminal sequence of a PL protein. PDZ and PL proteins are a binding pair given in specification, or a peptide mimetic of the 3 residues PL protein or a sequence of a PL protein. PDZ and PL proteins are a binding pair given in specification, or a peptide mimetic of the 3 residue PL protein, or a mall molecule having similar functional activity as the 3 residue PL protein. The reagents of the invention have the following activities: antiminflammatory, antiallergic, antiulor, antighorhatic, osteopathic, a chiminflammatory, and immunomodulator. The movel modulator is useful for treating a disease correlated with binding between a PDZ protein and PL protein. The disease cor cancer. The modulator is useful for modulating vesicular trafficking, tumour suppression, signal transcendence of immune response and organisation of synapse formation. The modulator is useful for facilitating the assembly of multiprotein complexes, often serving as a bridge between several proteins, or regulation of immune response and to inhibit leukocyte activation. The modulator is useful for treating diseases characterised by inflammatory and humoral immune response e.g., inflammatory asthma, allergy, inflammatory bowel diseases, ulcerative colitis, psoriasis, asthma, allergic thinits, aropic dermatiis, arthritis, anthia, arbeits, graft-versus-host diseases, atherosclerosis,

Alternatively, it can be synthesised by solid-phase techniques. One or both of the Ser residues at positions 1 or 2 may be absent. The peptide can be used in biological studies for the development of drugs. See also AAR10516-R10518 and AAR10520. (Updated on 27-AUG-2003 to correct OS
leukaemia, infectious diseases (viral infection such as human immunodeficiency virus (HIV)), and ischaemia. This sequence represents a PL protein C-terminal core peptide of a cell adhesion molecule of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Muscular contraction-inhibitory neuro-peptide(s) in mollusca - prepd. by purifying oligopeptide using high power lig. chromatography after extracting neuro:ganglion of Fusinus perplex ferrigineus.

```
This sequence represents a synthetic ferritin peptide which was used as a functional surrogate in the conjugate of the invention. The novel

C labelled conjugate comprises at least one label attended to a functional surrogate of an analyte of interest. The surrogate is capable of competing effectively with the analyte for a limiting amount of an effinity receptor for the analyte. The conjugate exhibits an activity that is altered upon interaction with the affinity receptor and this activity can be measured and related to the amount of the analyte present in a sample. Functional surrogates such as this have an immunorsactive or analyte for a limiting amount of its affinity receptor and this analyte for a limiting amount of its affinity receptor. Functional surrogate to compete effectively and with the analyte for a nalyte for analyte competitive affinity receptor. Functional surpastes are able to mamic naturally occurring analytes. They can be surrogates are able to mamic naturally occurring analytes. They can be surrogates are able to ompetitive affinity assays (esp. homogenous immunoassays) for detecting large macromolecules such as polymepties, polymucleoties, glycoproteins and lipid-containing confection include cardiac or tumour markers, allergens, hormones related to fertility-pregnancy or analytes associated with infectious disease. In detection include cardiac or tumour markers, allergens, hepatitis antigens or antibodies against them, human chorionic gonadotropin, human luteinising hormone, human placental lactogen, hepatitis antigen cardinomer, promone, human placental lactogen, hepatitis antigen cor toxoplasma, herpes virus, DK-MB, myoglobin, myosin light chain, troponin, cardinoembryonic antigen, alpha-fetoprotein, prostate-specific antigen and GA125 (a tumour marker). This sequence represents a peptide motif derived from ferritin which is important for selective binding affinity. Peptides containing motifs such as this may be used as functional surrogates in the conjugate of the invention. The novel labelled conjugate comprises at least one label attached to a functional surrogate of an analyte of interest. The surrogate is capable of competing effectively with the analyte for a limiting amount of confusition of the conjugate of competing effectively with the analyte for a limit in a sample. Functional surrogates such as this have confusitive present in a sample. Functional surrogates such as this have an immunoreactive group that allows the surrogates compete effectively of the analyte for a limiting amount of its affinity receptor. Functional surrogates are able to mimic naturally occurring analytes. They can be labelled for use in standard competitive affinity assays (egp. homogenous immunoassays) for detecting large macromolecules such as polymented cardiac or tumont markers, allergens, containing macromolecules, polymucleotides, glycoproteins and lipid-containing macromolecules, swell as well as small haptens. Typical diagnostic containing macromolecules, polymucleotides, glycoproteins and lipid-containing macromolecules, as well as small as small haptens. Typical diagnostic containing macromolecules, as well as small as small haptens. Typical diagnostic containing macromolecules, whuman growth hormone. Infectious disease. In particular, the assays are useful for detecting ferritining hormone, human placental competition includes or analytes associated with the municular, parathyroid hormone, human placental competition includes against them, human chorionic gonadotropin, human luteinising hormone, cytomegalovirus, Chlamydia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Labelled functional surrogate of an analyte - useful as competitor molecule in affinity assays, esp. for detecting large macromolecules such
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Functional surrogate; analyte; affinity receptor; immunoreactive group; mimic; homogenous immunoassay; detection; diagnostic analyte; Chlamydia; cardiac marker; tumour marker; allergen; hormone; fertility; myoglobin; pregnancy; infectious disease; fertitin; myosin light chain; troponin; follicle stimulating hormone; human; growth hormone; immunoglobulin E; prolactin; parethyroid hormone; placental lactogen; hepatitis antigen; antibody; chorionic genadotropin; luteinising hormone; cytomegalovirus; Streptococcus; rubella; toxoplasma; DK-MB; prostate-specific antigen; carcinoembryonic antigen; alpha-fetoprotein; herpes virus; CA125.

The novel labelled conjugate comprises at least one label attached to a functional surrogate of an analyte of interest. The surrogate is capable of competing effectively with the analyte for a limiting amount of an affinity receptor for the analyte. The conjugate exhibites an activity that is altered upon interaction with the affinity receptor and this activity can be measured and related to the amount of the analyte present in a sample. Functional surrogates such as this have an immunoractive group that allows the surrogate to compete effectively and with the analyte for a limiting amount of its affinity receptor. Functional surrogates are able to minc naturally occurring analytes. They can be labelled for use in standard competitive affinity assays (esp. homogenous immunoassays) for detecting large macromolecules such as polypeptides,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Labelled functional surrogate of an analyte - useful as competitor molecule in affinity assays, esp. for detecting large macromolecules such

polysaccharides, polynucleotides, glycoproteins and lipid-containing macromolecules, as well as small haptens. Typical diagnostic analytes for detection include cardiac or tumour markers, allergens, hormones related to fertility-pregnancy or analytes associated with infectious disease. In particular, the assays are useful for detecting ferritin, follicle particular, the assays are useful for detecting ferritin, follicle particularing hormone, human placental lactogen, hepaticis antigens or antibodies against them, human chorionic gonadortorpin, human luteinising hormone, cytomegalovitus, Chlamydia, Streptococcus a, rubella, toxoplasma, herpes virus, DR-MB, myoglobin, myosin light chain, troponin, and Call25 (a tumour marker). functional surrogate in the conjugate of the invention. The novel labelled conjugate comprises at least one label attended to a functional surrogate of an analyte of interest. The surrogate is capable of competing effectively with the analyte. The surrogate is capable of affinity receptor for the analyte. The conjugate exhibits an activity that is altered upon interaction with the affinity receptor and this conjugate in a sample. Functional surrogates such as this have an immunoreactive in a sample. Functional surrogates such as this have an immunoreactive crowp that allows the surrogate to compete effectively and with the surrogates are able to mimic naturally occurring analytes. They can be labelled for use in standard competitive affinity assays (esp. homogenous communicates are able to mimic naturally occurring analytes. They can be labelled for use in standard competitive affinity assays (esp. homogenous communicates, so well as small haptens. Typical diagnostic analytes for detecting large macromolecules, as well as small haptens. Typical diagnostic analytes for detecting include cardiac or tumour markers, allergans, hormones related to fartility-pregnancy or analytes associated with infectious disease. In particular, the assays are useful for detecting ferritin, follicle cardinal hormone, human placental lactogen, hepatitis antigens or antibodies against them, human chorionic gonadotrophi, human luteinising to cormone, cytomegalovirus, Chlamydia, Streptococcus a, rubella, toponin, toxomone, cytomegalovirus, Chlamydia, Streptococcus a, rubella, cardingen, alpha-fecoprolein, prostate-specific antigen and CALS (a tumour marker). The invention relates to a novel modulator of binding between a PDZ protein (poer-synaptic density protein 95 (PSD95), Drosophila large disc protein and Zonula Occludin 1 protein (20-1)) and a PDZ ligand (PL) correction. The modulator is a peptide having 3 residues of a C-terminal sequence of a PL protein. PDZ and PL proteins are a binding pair given in specification, or a peptide mimetic of the 3 residue PL protein, or a mail molecule having similar functional activity as the 3 residue PL protein. The reagents of the invention have the following activities: continflammatory, antiallergic, antiulcer, antiquabetic, osteopathic, antiarthratic, immunosuppressive, antiathercollerctic, osteopathic, antiarthratic, immunosuppressive, antiathercollerctic, oytostatic, anti-Y, vasotropic, and immunomodulator. The modulator is useful for treating a disease correlated with binding between a PDZ protein and PL protein. The disease correlated with binding between a PDZ protein and PL protein. The disease correlated with binding between a PDZ protein and PL protein. The disease can be a neurological disease, immune response disease, muscular disease can be a neurological disease, immune response correlator. The modulator is useful for facilitating the assembly of multicanduction. The modulator is useful for facilitating the assembly of multicant protein complexes, of the serving as a bridge between several proteins, or regulating the function of immune responses e.g., inflammatory bowel diseases, ulcerative colitis, psoriasis, asthma, allergy, inflammatory bowel diseases, ulcerative colitis, psoriasis, allergy, inflammatory bowel diseases, ulcerative colitis, asthma, allergy, inflammatory bowel diseases, ulcerative colitis, asthma, leaves and inflammatory bowel diseases, ulcerative colitis, psoriasis, allergy, inflammatory bowel diseases, ulcerativity colitis, astopic dermatitis, arthritis, atopic dermatitis, arthritis, astopic dermatitis, astopic dermatitis, astopic dermatitis, astopic dermatitis, astopic dermaticien colimun
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                minic, homogenous immunosassy, detection, diagnostic analyte, Chiamydia, cardiac marker, tumour marker, allergen, hormone, fertility, myoglobin, pregnancy; infectious disease, fertilin, myosin light chain, troponin; follicle stimulating hormone; human; growth hormone; immunoglobulin E, prolactin, parathyroid hormone; placental lactogen; hepatitis antigen; antibody, choritonic gonadotropin; luteinising hormone; cytomegalovirus, Streptococcus; rubella, toxoplasma; Dk-MB; prostate-specific antigen; carcinoembryonic antigen; alpha-fetoprotein; herpes virus; CA125.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Functional surrogate; analyte; affinity receptor; immunoreactive group;
                                                                                              Modulator of binding between discs-large homology repeat protein, 1
PDZ ligand protein, is a peptide having few residues of C-terminal
sequence of PDZ ligand protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ferritin motif #45 important for selective binding affinity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              0; Indels

This sequence represents a peptide motif derived from ferritin which is important for selective binding affinity. Peptides containing motifs such as this may be used as functional surrogates in the conjugate of invention. The novel labelled conjugate comprises at least one label curvantion. The novel labelled conjugate comprises at least one label curvantion. The novel labelled conjugate comprises at least one label curvantion. The novel labelled conjugate compression and this activity that is altered upon interaction with the analyte for a limiting amount of interest of an immunoreactive group that allows the surrogates such as this have considered to be amount of the analyte present in a sample. Functional surrogates such as this have an immunoreactive group that allows the surrogates such as this have considered for a limiting amount of its affinity receptor. They can be labelled for use in standard competitive affinity assays (esp. homogenous immunoassays) for detecting large macromolecules, as well as small laptens. Typical diagnostic containing macromolecules, as well as small laptens. Typical diagnostic containing macromolecules, as well as small haptens. Typical diagnostic ferritin, follicle stimulating hormone, human growth hormone, containing macroplecular, the assays are useful for detecting infectious disease. In particular, the assays are useful for detecting carciborin, human lutelnising hormone, cytomegalovirus, Chlamydia, Streptococcus an rubella toxoplasma, herpes virus, DK-MB, myoglobin, cytopoin, troponin, carcinoembryonic antigen, altimuter, proponin, carcinoembryonic antigen, altimuter, proponin, carcinoembryonic antigen, altimuter, proponin, carcinoembryonic antigen, altimuter. Proponin, carcinoembryonic antigen,
                                                                                                                                                                                                                                                                                                                                              Labelled functional surrogate of an analyte - useful as competitor molecule in affinity assays, esp. for detecting large macromolecules such
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ..

```
This sequence represents a peptide motif derived from ferritin which is important for selective binding affinity. Peptides containing motifs such as this may be used as functional surrogates in the conjugate of the invention. The novel labelled conjugate comprises at least one label attached to a functional surrogate of an analyte of interest. The currogate is capable of competing effectively with the analyte for a limiting amount of an affinity receptor for the analyte. The conjugate exhibits an activity that is altered upon interaction with the affinity receptor and this activity can be measured and related to the amount of the analyte present in a sample. Functional surrogates such as this have an immunoreactive group that allows the surrogate to compete effectively receptor. They can be labelled for a limiting amount of its affinity receptor. They can be labelled for use in standard competitive affinity assays (esp. homogenous immunoassays) for detecting large macromolecules such as well as swall as small appens. Typical diagnostic containing macromolecules, as well as small haptens. Typical diagnostic analytes for detection include cardiac or tumour markers, allergens, infectious disease. In particular, the assays are useful for detecting lacticity infectious disease. In particular, the assays are useful for detecting contacting macromolecules, as well assays are useful for detecting streptococcus and intensive normal process related to fertility-pregnancy or analytes associated with the infectious disease. In particular, the assays are useful for detecting streptococcus as rubbaticis antigens or antibodies against them, human consider a rubballar, toxoplasma, herpes virus, DK-MB, myoglobin, myosin light chain, troponin, carcinoemberone, antigen, alpha-coccus and rubbatic antigen and CANZS (a tumoroccus).

Labelled functional surrogate of an analyte - useful as competitor molecule in affinity assays, esp. for detecting large macromolecules such as ferritin.

Claim 51; Page 56; 156pp; English.

This sequence represents a peptide motif derived from ferritin which is important for selective binding affinity. Peptides containing motifs such as this may be used as functional surrogates in the conjugate of the invention. The novel labelled conjugate comprises at least one label attached to a functional surrogate of an analyte of interest. The attached is competing effectively with the analyte for a limiting amount of an affinity receptor for the analyte. The conjugate exhibits an activity that is altered upon interaction with the affinity receptor for the analyte present in a sample. Functional surrogates such as this have an immunoreactive group that allows the surrogate to compete effectively an immunoreactive group that allows the surrogate to compete effectively and with the analyte for a limiting amount of its affinity receptor. They can be labelled for use in standard competitive affinity assays to proceed an immunosassays) for detecting large macromolecules such as well as well as small haptens. Typical diagnostic containing macromolecules, as well as small haptens. Typical diagnostic analytes for detection include cardiac or tumour markers, allergens, containing macromolecules, as well as small haptens. Typical diagnostic ferritin, follicle stimulating hormone, human growth hormone, commone, human chorionic genadotropin, human luteinising hormone, cytomegalovirus, Chlamydia, composin, prostate-specific antigen and CALLS (a tumour marker).

Streptococus as rubbella, toxoplasma, herpes virus, DK-MB, myoglobin, myosin light chain, troponin, carcinoembryonic antigen, alpha-feroproperin, prostate-specific antigen and cargin captions.

Sequence 7 AA;

```
This sequence represents a peptide motif derived from ferritin which is important for selective binding affinity. Peptides containing motifs such as this may be used as functional surrogates in the conjugate of the invention. The novel labelled conjugate comprises at least one label attached to a functional surrogate of an analyte of interest. The surrogate is capable of competing effectively with the analyte for a limiting amount of an affinity receptor for the analyte. The conjugate exhibits an activity that is altered upon interaction with the affinity receptor and this activity can be measured and related to the amount of the analyte present in a sample. Functional surrogates such as this have an immunoractive group that allows the surrogate to compete effectively and with the analyte for a limiting amount of its affinity receptor. Functional surrogates are able to mimic naturally occurring analytes. They can be labelled for use in standard competitive affinity assays (esp. homogenous immunoassays) for detecting large macromolecules such as polyapptides, polyacacharides, polynucleotides, glycoproteins and lipid-containing macromolecules, as well as small haptens. Typical diagnostic analytes for detection include cardiac or tumour markers, allergens, therabet to fertility-pregnancy or analytes associated with infectious disease. In particular, the assays are useful for detecting ferritin, follicle stimulating hormone, human growth hormone,

Application US/10201444

Sequence 3. Application US/2030078378A1

Publication No. US2030078378A1

GENERAL INFORMATION:
APPLICANT: New York University Medical Center
TITLE OF INVENTION: BLOCKING EXPRESSION OF VIRULENCE FACTORS IN S. AUREUS
FILE REFERENCE: 63753/7

CURRENT APPLICATION NUMBER: US/10/201,444

CURRENT PILING DATE: 2002-07-23

PRIOR APPLICATION NUMBER: US/08/861,476

PRIOR PILING DATE: 1997-05-22
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
